## 1. Introduction

---

mWallet is an electronic wallet to store your confidential information related to Bank Accounts, Credit Cards, Insurance Policies, Memberships, Passwords & more. Data saved in mWallet is encrypted using 256-bit Blowfish encryption method and password protected making mWallet both safe and reliable.

mWallet allows you to organize your data into 8 different categories where each category has it's own predefined template.

### **Available Categories:**

1. Bank Accounts
2. Cards - 3 sub categories to filter your data:
  - ATM
  - Credit
  - Debit
3. Email Accounts
4. Insurance Policies
5. Memberships
6. Passwords - 6 sub categories to filter your data:
  - Computer Passwords
  - Dial-Up Accounts
  - Online Banking
  - Online Stores
  - Websites
  - Others
7. Software Serials
8. Personal Notes

With mWallet on your phone you no longer need to remember dozens of user names and linked passwords. Remember just one Master Password to access all your data and enjoy the comfort of having all your confidential information always with you.

## 2. Master Password

### 2.1 Setting Master Password

When you launch the application for the first time you will be prompted to create a 'Master Password' which will be later required to open mWallet and access your data stored in it.

Enter a password in the Choose Password field, and verify the password by entering it again in the Confirm Password field and then select Save.

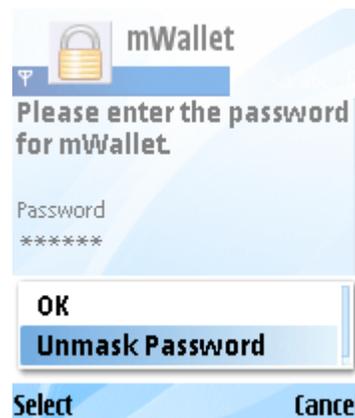

**Note: It will not be possible to open mWallet or access your data if you loose your 'Master Password'.**

### 2.2 Entering Master Password

You will be required to enter your password each time you launch mWallet or resume a suspended session.

While entering the password the characters will appear briefly then will be masked to protect you from prying eyes. Incase you are facing difficulties in entering the password and/or you want to make sure that you are entering the password correctly you can unmask the password by selecting Unmask Password option from the password entry screen.

### 2.3 Changing Master Password

You may Change your password at a later time from within mWallet by selecting the Change Password option from the application's home screen.

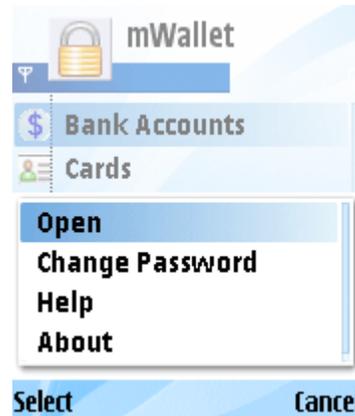

You will be prompted to first enter your current password and then directed to the Change Password screen where you can set a new password.

### 3. Using mWallet

Once you have entered your password correctly the application's home screen is displayed.

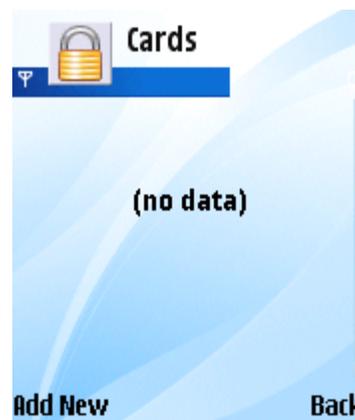

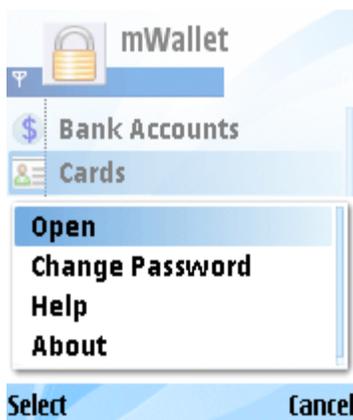

mWallet Home Screen

Change Password, Help and About options on Home Screen

#### 3.1 Adding Records

To add a record select the desired category from the home screen and then select 'Add New'. For instance if you wish to save your Credit Card information in mWallet, from the home screen select Cards -> Add New

While entering sensitive information like PINs and Passwords the characters will appear briefly and then will be masked to protect you from prying eyes. To make such information readable select 'Unmask Fields' and to hide it again select 'Mask Fields' from options.

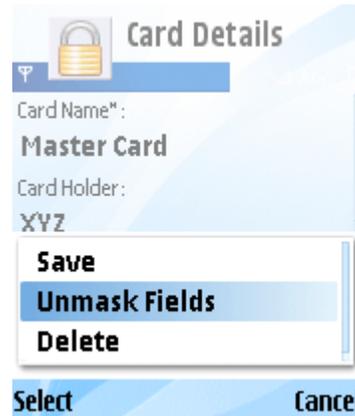

### 3.2 Viewing and Managing Records

To view or edit a record select the desired category from the home screen, move to the desired record and then select 'Open' from the options.

By default sensitive information like Credit Card number, PINs and Passwords are masked. To make them readable select 'Unmask Fields' from options.

Masked Card Number, Verification Value & PIN fields

'Unmask Fields' option on the 'Card Details' screen

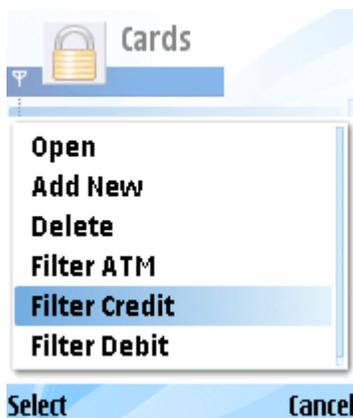

To delete a record select the desired category from the home screen, move to the desired record and select 'Delete' from options.

### 3.3 Filtering Records

'Cards' saved in mWallet can be organized into 3 sub-categories - ATM, Credit and Debit.

Similarly, 'Passwords' can be organized into 6 sub-categories – Computer, Dial-Up, Online-Store, Online-Banking, Website and Others.

Incase you have more than one record saved under 'Cards' or 'Passwords' you will notice the Filter options that will help you in filtering out records saved under a particular sub-category.

Filter options appear on 'Cards' screen if you have more than one record saved under the Cards category

Filter options appear on the 'Passwords' screen if you have more than one record saved under the Passwords category

## 4. Categories and Templates

---

mWallet allows you to record your confidential information under 8 different categories where each category has its own template. Refer to Table 1 for a list of all the categories and available fields in each template.

Table 1 – Available categories and fields for each category

Category	Available Fields

## 5. Feedback & Support

---

### 5.1 Technical Support

If you need further assistance after reading this manual, please fill out our Technical Support Request form: [http://www.twistsoft.com/support/request\\_support.html](http://www.twistsoft.com/support/request_support.html)

Alternatively, you can send us an email at: [support@twistsoft.com](mailto:support@twistsoft.com) with the following details:

- Product Name & Version
- Your handset and Model number
- Mobile Operator
- Precise description of the problem including exact error message if one exists.

Our Support Team will answer your email within two business days. Also, please add [support@twistsoft.com](mailto:support@twistsoft.com) and [support@twistsoft.net](mailto:support@twistsoft.net) to your allowed senders list if you are using any anti-spam on your mail boxes.

Phone support is presently not available.

### 5.2 Feedback and Upgrades

To submit your feedback or suggestions fill out our Feedback form located at: <http://www.twistsoft.com/support/feedback.html>

Once you have purchased the application we recommend you to visit our Customer Zone at: [http://www.twistsoft.com/customer\\_zone.html](http://www.twistsoft.com/customer_zone.html) and submit your email address (the one that you used while purchasing the application) to receive notifications of new version releases as soon as they are released.
